2. Hyperloop: Hypercool? Or Hyperflop?

A system like this installed between Los Angeles and San Francisco would make it possible to connect the two cities in less than 30 minutes, faster than a plane that travels the same distance in 35 minutes at a speed of 885 km/h. Eventually, this mode of transport could connect multiple countries, even the world, by connecting the biggest cities like a kind of subway, but on a global scale.

3. Renewable energy: an update on market trends

For several years now, renewable energy can no longer be considered as developing technology, but rather as a mature industry, competitive with fossil fuels, subject to economic cycles and consolidation movements, which is gradually moving away from the backing of public authorities.
